West Ring: defocalisation of nouns triggers NPx loss

Isu: **A-form** (*tá-bvó, ká-fú*) vs. **B-form** (*bvó t-í, fú k-î*) of the nouns ‘dogs’ (13) and ‘rat’ (7) under conditions of syntactically triggered (de)focalisation

- | | | | | | |
|-----|------------|-----------|------------|---------------|---------------------------|
| (a) | <i>fú</i> | <i>kí</i> | <i>kò?</i> | <i>tà-bvó</i> | ‘The rat saw (the) DOGS.’ |

| (b) | <i>bvó</i> | <i>tí</i> | <i>kò?</i> | <i>kà-fú</i> | ‘The dogs saw a/the RAT.’ |
| | dogs | 13 | see | 7-rat | |

West Ring: defocalisation of nouns triggers NPx loss

Isu: B-forms of *kábá?* ‘rope’ under conditions of past perfective focus (P0 *má`*, P1 *mâa*, P2 *má'á*) and predication focus (*ηwð*)

- | | | | | | | | |
|-----|-----------|-------------|------------|------------|------------|-----------|--|

Model of gender / class marker renewal (Greenberg 1978)

Restructuring of adnominal class marking (à la Greenberg 1978):

Demonstrative

- > Stage I article (definite article)
- > Stage II article (definite/indefinite article)
- > Stage III loss of functional contrasts, occurrence with practically all Ns (gender marker, classifier)

Isu: “out-of-focus” enclitic as determiner

Determining enclitics with *ká-lóʔó* (7/8) ‘place’

- (a) OF: *lóʔó k-í* (out of focus form)
- (b) DEM: *lóʔó ʔk-á* (**k-í*) ‘this place’ (D1), *lóʔó ʔk-í* (**k-í*) ‘that place’ (D2)
- (c) DEF-0: *lóʔó ká ʔtée k-í* ‘the (aforementioned) place’
DEF-1: *lóʔó ká ʔtée ʔk-á* ‘this (aforementioned) place’
DEF-2: *lóʔó ká ʔtée ʔk-í* ‘that (aforementioned) place’
- (d) ?DEF: *lóʔó ká ʔàa k-à* ‘the (aforementioned) place’
- (e) INDEF (specific or unspecific): *lóʔó kà líi k-í* ‘some place, another place, a certain place’
- (d) OTHER: *lóʔó kà líi ʔk-á* ‘the other place’
- (e) SAME: *lóʔó kà móʔó k-í* ‘the same place’
- (f) (*ká-*)*lóʔó ká mɔ̀ʔ* (**k-í*) ‘one place’ vs. *ú-lóʔó ú bèe* ‘two places’

General observations

Liminal position of Kuk and Kung between West Ring and Central Ring: absence of contrast 10 vs. 13 (WR), presence of 10 (CR)

Stability of minor genders with semantically robust core:

7/6 (HAND, FOOT), 7/4 (ARM, LEG, THIGH, ?JAW)

Trend towards loss of 4 (> Eastern Grassfields)

Derivational functions of noun classes: DIM, (AUG), deverbal (action, result, abstract quality, instantiation of quality)

Incipient stage of transition from adnominal prefix marking to enclitic (> suffix?) marking of noun classes

Sensitivity to information structure: determiner enclitic

Importance of tonal class marking: tone of NPx (H vs L) > relic of augment, tone of agreement markers: L (1, 9, 6a) vs. H (rest)
