

Workshop „Global Inequality”

Berlin (Institute of Asian and African Studies, Schlegelstr. 26)

21-22 October 2011

The goal of the workshop is to prepare a joint research agenda on inequality that all participants of the overall project can follow. Toward this goal, some participants, who have already conducted or planned research in the framework of the project, should briefly outline their individual projects adding some particularities of their regional or transnational context. These presentations should then be compared and contrasted in order to arrive at a common conceptual structure and methodology. Concepts and methods should first be discussed in the entire group, then in smaller groups focusing on the regions and transnationalism, and finally results should be presented and consequences drawn for further research.
